1. **Open Program.cs**
   - **Code in Main**
     - Store the value into number by reading it as a command line argument
     - Invoke the GetWhole() method from the DecimalSplitter class
     - Invoke the GetFraction() method from the DecimalSplitter class
     - *Hint:* *The methods of DecimalSplitter class are static*

   - **Code in DecimalSplitter**
     - Implement the methods GetWhole() and GetFraction(), which accept the number entered
